1. Hardware

1.1 Specification

LNC-T/M 6□8	SPEC
Monitor	10.4" TFT LCD
SD RAM	256MB
System CF Card	1G or above
Data Interface	USB/LAN
USER I/O	20 Input/16 Output, up to 2 set
Serial I/O	1 Port, use with SIO/EIO to extend I/O board upto 128IN/128OUT. (only available on T/M668A)
MPG Interface	3 in 1 MPG, include IN and Encoder
Control Axes	Max. 6 axes(include Spindle) T/M668A has 6 axes; T618/M628 has 4 axes
Power	AC 110V/240V 50Hz/60Hz input power

LNC- T/M 6□8A System Power Demand

Power Category	Specification	Usage	NOTE
System Power	AC110V/240V 50Hz/60Hz	For System	
External Power(24V)	DC24V/(4A UP)	For external IO

T 6□8A Controller Front View

M 608A Controller Front View

T/M 6□8A Controller Back View

1.3 System wiring diagram and instructions

1.3.1 System wiring

Wiring on controller

T/M 6□8A Wiring on controller

PC interface

Motion ports and IO, accessories

Note: SIO only available on T/M 668A

Connectors

Item	Ports	Function	Connector	Remark
1	MDI	MDI	2.54mm 26PIN IDC	
2	MPG	MPG port	D-SUB 15 PIN(Female)	Include command and IN
3	Serial I/O	I/O extand port	D-SUB 15 PIN(Male)	Avalible on T/M 668A
4	AXIS 1~6	Axis	D-SUB 25 PIN(Female)	T618A/M628A has 4axes (AXIS1~3 、AXIS6) ; T/M668A has 6 axes
5	USER I/O	20IN/16OUT	HD_D-SUB 44 PIN(Male)	T618A/M628A IO2 is optional;T/M668A IO2 is standard
6	E24V 、EGND 、FG	24V Input	3PIN 5.08mm terminals	
7	Local_IN/EMG/OT	Tool Measure and Safety function	6PIN 5.08mm terminals	
8	OP	Connect to OP	2.54mm 34 PIN IDC	
9		PC interface	Regular PC interface	

1.3.2 System wiring instruction

A 、Power input :

A-1 : System power supply

- ◎ Details : Offer 5V.12V power for system.
- ◎ Terminal details as following :

Put AC110V/230V power connect to power supply's AC IN, FG to grounding, please connect with metal chassis (grounding)

LNC-T/M 6□8A POWER will power on when AC power input, no other switch. If you need a switch, please arrange with TRF9500 ON/OFF switch board.

TRF9500 On/OFF switch board

Step 1:

Step 2:

ON/OFF connector signal (PIN define as following) connect with ON/OFF button

PIN	Name	Description
1	-	-
2	-	-
3	-	-
4	-	-
5	EGND	E24V power GND
6	OFF1	OFF button PIN 1
7	-	-
8	ON1	ON button PIN 1(E24V)
9	-	-
10	-	-
11	-	-
12	OFFL	OFF button light control
13	OFF2	OFF button PIN 2
14	-	-
15	ON2	ON button PIN 2

ON/OFF button PIN Wiring:

- AC power cable: We recommend you use PVC cables and the cable diameter is 0.75 mm² or above material (better within 5m).
- Before sending electricity, please make sure the wiring is correct. (Please do not connect AC power to FG; otherwise the controller will be burned out.)

A-2: External E24V Connector

- ◎ Description: E24V is for controller, power control and external I/O to use.
- ◎ Connector Description: As below:

E24V and EGND connect to external power supply AC output side ; FG to grounding, please connect with metal chassis (grounding)

- ◎ Power Demand :
 - (1) E24V/4A above
 - (2) Output voltage ripple and noise is smaller than 150mVp-p.

- We recommend you to use the power supply of LNC (E24V/5.8A, E5V/3A). With using this model, LNC have passed the CE test. We cannot guarantee your needs without using this model.
- When using this power supply, please make sure the installation location will not be too far (DC output may have drop voltage.) After booting, E24V power supply voltage will need to stay within E24V±0.5V.

B 、Motion Control:

Note: T/M 668A Support 6 Axes

B-1: Servo Control Connector

- ◎ Description: B-1 offers 4 axis control pin(X, Y, Z, SP) to connect and control back side drives.
- ◎ Connector Description: Use D_SUB 25PIN (Jack) connect, details as below:

PIN	Name	Description	PIN	Name	Description
1	/PB	Pulse output /B	14	/PA	Pulse output /A
2	PB	Pulse output B	15	PA	Pulse output A
3	E5V	External E5V for linear scale	16	-	-
4	EGND	External grounding	17	DACO	Analog voltage output
5	AGND	Analog output grounding	18	E24V	External power E24V
6	SRV_ON	Servo start control	19	ALARM	Servo alarm
7	EGND	External power grounding (E5V,E24V)	20	SVI_COM	Servo COM setting
8	SVI_COM	Servo COM setting	21	EGND	External power grounding
9	SRV_RST	Signal reset signal	22	-	-
10	C	Encoder C	23	/C	Encoder /C
11	A	Encoder A	24	/A	Encoder /A
12	B	Encoder B	25	/B	Encoder /B
13	FG	Chassis grounding	-	-	-

◎Remark:

- (1) Axis 5, 6 with E5V, Axis 5: $\pm 10V$ voltage output(optional), Axis 6: offer $\pm 10V$ voltage output, as following chart

4 axis	Support 1 analog
	Support 2 analog
6 axis	Support 1 analog
	Support 2 analog

- (2) Only SP Connector has both analog $\pm 10V$ and pulse E5V output. Other axis only has E5V output.

- When making the connection cables of control pin and back-end driver, please use better shielding cover and cables (A.W.G24 UP) And make sure the connection of shielding cables to reduce the chance of noise interference. LNC offers standard cables for selection.
- Please don't bind signal control cables with power cables at the same time or put at the same cable box.

B-2: MPG Control Connector

- ◎ Description: This connector is for MPG to use which includes pulse and IO signal.
- ◎ Connector Description: Use D_SUB 25PIN (Jack) connect, details as below:

PIN	Name	Description	PIN	Name	Description
1	E5V	MPG IO power	9	EGND	MPG power grounding
2	MPG4	MPG 4	10	MPG 5	MPG 5
3	E/B	Encoder /B	11	EB	Encoder B
4	E/A	Encoder /A	12	EA	Encoder A
5	X100	MPG ratio 100	13	X10	MPG ratio 10
6	MPG3	MPG 3	14	MPGY	MPG Y
7	MPG1	MPG 1	15	MPG 6	MPG 6
8	E5V	MPG E5V power	-	-	-

- ◎ Description:
 - (1) Encoder feedback is differential signal.
 - (2) This pin offer 8 sets of 5V input for axis direction and ratio selection to use.
 - (3) PIN 1 can be used for MPG IN power, but don't use 24V to avoid damage.

B-3: OT& EMG Connect

- ◎ Description:
 - (1) OT connect is the over travel point and a safe point to protect hardware. Normally will be at short-circuit situation.
 - (2) When you want to make servo on, you will need to make OT and EMG to be short circuit, therefore OT object is close pin. When using several OT objects, please connect with serial way, and EMG will be short circuit state at normal using.
 - (3) If you use the EMG on OP, no need to short EMG1/ EMG2.

- Because the OT Connector will have usage of parallel connection (1 hole with 2 lines), please make sure the connection is firm in order to prevent malfunction caused by poor contact.
- If the OT and EMG PIN are not used, please make it at short-circuit situation.

C, IO Control:

Note: only T/M 668A Support SIO

C-1 : ON BOARD IO connector

Detail: T/M 6□8A offers 1 I/O port (connect to 20IN/16OUT REL board), O is 24V level, Max. current 60mA, I is NPN/PNP switchable.

USER IO Connector

- ◎ Description: C-1 offers 20IN/16 OUT IO interface, usually for connection with RELY board.
- ◎ Connector Description: Adopts HD_SUB 44PIN (Plug), please refer to appendix 1 for definition: PIN

- ◎ Out point usage: If you want use Output point without RELY board, use inductive load please arrange with flywheel diode for protection purpose.

Recommend item: IN4007

- Max current loading is 60 mA, otherwise will cause damage.
E.G. $E24V/60\text{ mA}=400\Omega$ ←Loading resistor must higher than this.
- When use inductive loads (E.g. RELAY), please add flywheel diode for protection purpose.
- If OUT point short with ground, IC will be burned right away.

C-2: Quick IN Connector

- ◎ Description: C-3 offers 2 IN for tool measuring.
- ◎ Connector Description: Connector's use 2PIN JP terminal, details are as below:

- IN is 24V standard and same source with E24V, EGND, otherwise reading will be abnormal.

C-3 : MDI

- ◎ Description: Use for connect to MDI.
- ◎ Connector Description: 2.54mm 26PIN IDC

C-4 : OP Connector

- ◎ Description : Offering for OP connecting, max 80IN/80OUT, power level 5V DC.
- ◎ Connector Description : 2.54mm 34 PIN IDC Connector °

OP Connector I/O points are all 5V level, if connect higher than 5V, it will damage the board.

C-5 : Serial IO port

- ◎ SIO port

Detail : C-2 used for extend I/O port, ues with SIO/EIO boards to extend I/O board.

Connector: D_SUB 15PIN(Male), connect to SIO/EIO board

- This control port MUST use with shelled cable and large then A.W.G24, LNC offer standard cable for this.
- (1、9) ; (2、10) ; (3、11) ; (4、12)Need twisted cable.
- DO NOT set these cables with POWER cables on panel box.

I/O card and SIO module

LNC-T/M 668A can extend the I/O control upto 128IN/128OUT following are the wiring diagram:

- ◎ Serial I/O functions as following

- ◎ Serial I/O connect as following: (1 PORT accept upto 2 slave board)

Serial I/O extended I/O points:

Modules

Controller site (MASTER)		
Hardware	Serial port	Remark
LNC-T/M 668A	1	

I/O extend board(SLAVE, each can serialy extend)		
Hardware	I/O points	Remark
SIO-1540	40IN / 32OUT	
EIO-2000-1	40IN / 32OUT	
EIO-2000-2	60IN / 48OUT	
SIO-1520	40IN / 32OUT	Used for Operation Panel
OP-2520	64IN / 64OUT	Used for Operation Panel

User I/O port		
Hardware	I/O	Remark
REL-2840	20IN / 16OUT	

I/O port amount:

(1) LNC-T/M 668A, with EIO-2000-2, max I/O point is

$$1(\text{SIO}) \times 2(\text{EIO-2000-2}) \times 60 \text{ IN} = 120\text{IN}$$

$$1(\text{SIO}) \times 2(\text{EIO-2000-2}) \times 48 \text{ OUT} = 96 \text{ OUT}$$

(2) LNC-T/M 668A, with SIO-1540, max I/O is

$$1(\text{SIO}) \times 2(\text{SIO-1540}) \times 40 \text{ IN} = 80\text{IN}$$

$$1(\text{SIO}) \times 2(\text{SIO-1540}) \times 32 \text{ OUT} = 64 \text{ OUT}$$

And so on.

Each hardware set up according to it's user manual.

D 、 PCM-6889 com Defined :

PCM-6889 COM1

Pin#	Signal Name	Pin#	Signal Name

3. Setting:

A: E24V Power Connector

⊙Description: This pin is for O point output power, if this pin has problem, O point output will be error. (Has no effect to IN point).

⊙Rated Capacity: E24V±0.5V (3A UP)

B, C: Serial Communication Connector

⊙Description: 1 B, C Connector is for serial connection; need to connect with controller's RIO port.

2 B, C Connector is for parallel signal, is for serial expansion to use.

⊙expansion example: Connection instruction for 2 SIO-1540 cards.

D, E: IO Port

⊙Description: 1. D, E head connects to REL to do IO controller. Each port can control 20IN/16OUT to coordinate with REL board.

⊙IN points as below: (REL is not used together)

◎O point direct usage:(REL is not used together)

O type is SOURCE TYPE, motion output is E24V, and max voltage is 60mA

- Please do not make the current more than 60 mA, when doing load selection. Otherwise it may have damage to components. $E24V/60\text{mA}=400\Omega$ ← Load resistance cannot be less than this value.
- When O point grounds, if short-circuit happens, IC will burn out instantly, please pay special attention to is.

F, G: Spare IO Connector

◎Description:1 F,E head reserve 32OUT/24IN-IO 『control interface』, this interface cannot be directly used, need to coordinate with SIO-1530 card.

H: Communication/Power Light

◎Description:

- (1) E5V Indicator light: when SIO-1540 module connects with controller system, sending power, indicator light will be ON that means the module power is complete.
- (2) CS, DO Indicator light: If SIO-1540 connects with controller correctly, sending power, CS and DO will ON. If these two lights didn't ON at the same time, there may be some errors in it; there will also have problems after later transmission.
- (3) LK,DI Indicator light: When CS,DO Indicator light On, If SIO-1540 module's SLAVE number setting is the same to PLC setting, LK,DI will ON.
- (4) E24V Indicator light: When E24V Indicator light ON, that means the O interface power OK, but if it's OFF, O point will not have feedback.

I: SLAVE JUMPER

◎Description: SLAVE number setting, after setting, you need to coordinate with software, PLC plan to work normally. Please do not change randomly.

◎Setting Sample:

4. PIN Definition

1. E: 44 PIN HD Connector (Jack) definition, please refer to annex 2

2. D: 44 PIN HD Connector (Plug) definition, please refer to annex 2

1.8 I/O EIO2000 Definition

Specification

1. Type (1) - 40 IN / 32 OUT; Type (2) - 60 IN / 48 OUT
2. Every serial port can connect with 2 sets of EIO-2000 ; Max up to 120 IN / 96 OUT.
3. NPN and PNP mode setting.
4. SLAVE number setting (1~3)

Hardware:

EIO-2000(60in 48out)

EIO-2000(40in 32out)

Connector Light Description

I/O P3	HD SUB 44PIN Jack	20IN/16OUT IO port	To REL
Setting			
Picture	Component	Function	Description
S1 S2 S3		SLAVE number setting	The one is 『ON』, others are OFF
NPN PNP		IN mode	20 IN are all at the same mode

*1 SIO1 and SIO2 is one on one parallel circuit for serial connection.

Setting and light description

(A) PNP & NPN switches:

You can use this switch to change EIO-2000 IN mode to make the 20 IN to be the same mode. (P1~P3), each connector can be set independently.

(1) PNP mode :(default)

When changing to PNP, this IN will be set to be PNP mode> external signal is E24V, at this time this IN works.

(2) NPN mode:

When changing to NPN, this IN will be set to be NPN mode> external signal is EGND, at this time this IN works.

- Component power should be the same with E24V and EGND; otherwise the IN will be invalid.
- Please switch off E24V power and do mode switching, make sure not to do switching while electricity ON.

(B) IO Port (P1,P2,P3):

This Pin is to REL board to do IO control. Every port can control 20IN/16OUT with REL board.

(1) IN Usage (Take a point to be example)

PNP:

NPN:

(2) OUT Usage

OUT type is SOURCE TYPE, motion output is E24V, max voltage is 60mA

Notice:

- Please do not make the current more than 60 mA, when doing load selection. Otherwise it may have damage to components. $E24V/60\text{mA}=400\Omega$ ← Load resistance cannot be less than this value.
- When O point grounds, if short-circuit happens, IC will burn out instantly, please pay special attention to is.

(C) Serial Port SIO1,SIO2:

1. SIO1, SIO2 is serial communication control connector; need to connect with controller RIO port.
2. SIO1, SIO2 are 2 serial connectors for serial connection to expand.

Usage is as below:

(Take serial connection of 2 sets of 40IN/32OUT for example)

- **Serial connection cable is one on one cable, please make sure the shielding of wire, and refer to annex 1.**

(D) SLAVE Switch:

This switch is slave number setting, you need to use software, PLC planning to coordinate with this, please do not change randomly.

1. (S1) pull to the end, 2 and 3 pull to upper side, and this IO mode is SLAVE1

2. (S2) pull to the end, 1 and 3 pull to upper side, and this IO mode is SLAVE2.

(E) E24V/EGND power input terminal:

1. 1.40 IN /32 OUT modules have 1 power connector, and 60IN /48 OUT module has 2 power connector. This power is for IO input and output. When using this module, please input E24V at 2 connectors to make the power stable.
2. When the power is introduced correctly, the E24V light will on.

- **Input voltage range is between 22V~26V.**
- **FG connects to power chassis, not to EGND. If the chassis connects to EGND, system will have error, please pay more attention on the wiring.**

(F) Light description:

E5V Light:

After EIO2000 and controller connecting to each other, send electricity and this light is ON> Module power is OK.

CS, DO Light:

After EIO2000 and controller connecting to each other, send electricity and CS,DO will be ON, but if not> there is error and the communication will be error too.

LK, DI Light:

When CS, DO is ON > if the EIO2000's SLAVE number setting is in accordance with PLC> the communication is OK>LK, DI will be ON.

E24V Light:

E24V is on> IO interface power is correct, if this light is OFF, IO will not have action.

IO Connector PIN definition is 3 connectors, please refer to annex 2.

1.9 RELY 2840 definition

REL2840

1.9.1 Description:

- (1) Offers 20 sets of IN and E24V/EGND input point with terminal lock.
- (2) Output side offers 2 sets of A,B,C connects and 14 sets of A,C connects, total for 16 sets of output.
- (3) Input connect capacity is AC 6A/250V with protection circuit.
- (4) This relay board use for AC/DC mix control, but the machanical relay board has life time and response time limit. For high frequency ON/OFF purpose, please use REL7816D.

1.9.2 Hardware layout:

1.9.3 Connector description:

IO Connector			
Picture	Component	Function	Description
A	D_SUB HD 44PIN Jack	20 IN / 16 OUT	USER IO
B	5.08mm Connector with lock	IN Connector	To external component
C	5.08mm Connector with lock	OUT Connector	To external component

Note

- 1.B Connector with terminal lock offers 20 sets of EGN and 20 sets of E24V Connector to cooperate with input.
- 2.Every RELAY will have its own red LED, when the output is ON, the LED will be ON. Users can use this

to debug for relay and output points.

1.9.4 Setting:

A: IO Control Connector

- ◎ Description: This connector is 20 IN/16 OUT IO control connector to connect with SIO and EIO.

B: IN Connector

- ◎ Description: 1. IN signal will be lead in by these connectors, via IO control connector to return back to SIO and EIO.

2. The E24V and EGND (0V) of Connector was led by SIO and EIO, via IO control connector to REL-2840.

- ◎ IN Connector usage sample:

- When using NPN IN, please make sure the SIO and EIO support NPN mode
- Please follow direction to do wiring, not make E24V and EGND at short circuit situation.

C: OUT Connector

- ◎ Description: REL-2840 O Connector is at RELAY A and C, capacity is 6A / 250V.
- ◎ OUT Connector usage sample:

- OUT is mechanical pin, may not suitable for
- DO NOT over capacity.

1.9.5 Connector PIN definition:

A: 44 PIN HD Connector (Plug) definitions,

PIN	definition	PIN	definition	PIN	definition
1	IN 00	16	IN 01	31	IN 02
2	IN 03	17	IN 04	32	IN 05
3	IN 06	18	IN 07	33	IN 08
4	IN 09	19	IN 10	34	IN 11
5	IN 12	20	IN 13	35	IN 14
6	IN 15	21	IN 16	36	IN 17
7	IN 18	22	IN 19	37	OUT 02
8	OUT 00	23	OUT 01	38	OUT 05

10	OUT 06	25	OUT 07	40	OUT 11
11	OUT 09	26	OUT 10	41	OUT 14
12	OUT 12	27	OUT 13	42	-

13	OUT 15	28	-	43	E24V
14	-	29	-	44	E24V
15	EGND	30	EGND	-	-

1.9.6 Power wiring note:

When Applying REL2840, please add wiring at IB10 as following

- This POWER must same with IO module OR controller 24V power.

1.10 Relay board REL7816D Instruction

1.10.1 Regulation:

- (1) Offer 20IN and E24V/EGND terminal.
- (2) 16 MOSFET (SINK) output, used for DC control. High frequency ON/OFF.
- (3) Output Max 2A °

1.10.2 Hardware LAYOUT:

1.10.3 Connector ,Unit Description:

IO Connector			
Picture	Component	Function	Description
A	D_SUB HD 44PIN Jack	20 IN / 16 OUT	USER IO
B	5.08mm Connector with lock	IN Connector	To external component
C	5.08mm Connector with lock	OUT Connector	To external component

◎ Note :

Note 1:B Connector with terminal lock offers 20 sets of EGN and 20 sets of E24V Connector to

cooperate with input.

Note 2: Every MOSFET has its own red LED, when the output is ON, the LED will be ON. Users can use this to debug for relay and output points.

1 Setting:

A: IO Control Connector

◎ Description: This connector is 20 IN/16 OUT IO control connector to connect with SIO and EIO.

B: IN Connector

◎ Description:

1. IN signal will be lead in by these connectors, via IO control connector to return back to SIO and EIO.
2. The E24V and EGND (0V) of Connector was led by SIO and EIO, via IO control connector to REL-7816D.

◎ IN Connector usage sample:

- When using NPN IN, please make sure the SIO and EIO support NPN mode
- Please follow direction to do wiring, not make E24V and EGND at short circuit situation.

C: OUT Connector

◎ Description: REL7816D Output is MOSFET acting, acting on (EGND), output max 2A.

◎ OUT Connector usage sample:

- OUTPUT only use with DC.
- Max current 2A, otherwise it will damage the board.

2 REL7816D must add wire on CN10 Connector as following

1.11 Annex

Annex 1:

44 PIN HD Connector pin details

IO pin details

PIN	Define	PIN	Define	PIN	Define
1	IN 00	16	IN 01	31	IN 02
2	IN 03	17	IN 04	32	IN 05
3	IN 06	18	IN 07	33	IN 08
4	IN 09	19	IN 10	34	IN 11
5	IN 12	20	IN 13	35	IN 14
6	IN 15	21	IN 16	36	IN 17

A3 Mitsubishi

Appendix B RS232 Connection Description

For remote transmission connector standard, it means the remote transmission connector and the external setting signal connection standard. RS-232C is the very easy transmission standard. If not using hard-part flow control, only needs 3 signal cables in order to accomplish the double transmission jobs.

The electronic feature of RS232 belongs to the in-balance transmission method. So the transmission distance is a little bit short, approximate 15m, due to the anti-interference function is weak. According to the RS-232C standard, connector circuit must be the physical D type connector. D type connector has 25 cords (short name is DB25). But, it can be 9 cords (short name is DB9). Most of PC uses DB9, like the diagram show below:

PIN	Abb.	Meaning
Pin1	CD	Carrier Detect
Pin2	RXD	Receive
Pin3	TXD	Transmit
Pin4	DTR	Data Terminal Ready
Pin5	GND	Ground
Pin6	DSR	Data Set Ready
Pin7	RTS	Request To Send
Pin8	CTS	Clear To Send
Pin9	RI	Ring Indicator

Transmitting Cable instruction

There are two types of Pin for a normal type remote port. One is 9 Pin and the other one is 25 Pin. Usually the NC side has 9Pin male port. But, the PC side has either 9Pin or 25Pin. Male port.

The method to connect NC and PC is to do the transmitting via jumper cable. If user's equipment is 9Pin, then please use the 9Pin connector. Actually, 9Pin is very useful for other controller system application. Sometimes, 3Pin can have the same control function. So the simplest 3Pin is to use the 2nd, the 3rd and the 5th pins to receive and transmit:

Pin definition as following:

NC COM1(9pin female)
to
PC COM1(9pin female)

NC COM1(9pin female)
to
PC COM2(25pin female)

NC	PC
pin2(RD)	pin3(TD)
pin3(TD)	pin2(RD)
pin5(SG)	pin5(SG)

NC	PC
pin2(RD)	pin3(TD)
pin3(TD)	pin2(RD)
pin5(SG)	pin7(SG)

Appendix C net cable instruction

Ordinary HUB connects with controller:

Directly connection
